Our Story

Snap Dock's story began in 1982 when our parent company first patented a rotationally molded collapsible container, quickly becoming the standard for the automotive and manufacturing industries. The company later expanded into other rotational molded products that serve the industrial market. Along the way, we saw an unmet need for an industrial floating walkway system that could be rapidly deployed. In 2018, Snap Dock rolled out a polyethylene floating walkway into the industrial market. After finding success with that product, we began developing a recreational lineup according to the same core tenets of durability and ease-of-use, launched in 2021.

We look forward to continuing to expand our product selection of best-in-class floating docks and accessories.

The Snap Dock Advantage

Attractive Non-Slip Surface

All dock sections feature an attractive non-slip surface that channels water and helps conceal dirt.

Seamless Color Integration

Snap Dock's coupler system matches the color of dock components.

Reinforced Surface Support

Snap Dock components are engineered to reduce deflection on the walking surface.

Unmatched Strength

Snap Dock's coupler system allows our docks to withstand significant wave action in rough water.

Industrial Grade Durability

All Snap Dock modular components are rotationally molded with industrial grade plastic (LLDPE) ensuring consistent performance in the most extreme weather conditions.

Customer Experience

We are committed to creating a family-like customer experience for distributors, dealers, and end-users.

Snap Dock Builder Tutorial

The Snap Dock Builder allows customers to configure their own dock layout which can then be shared with a dealer.

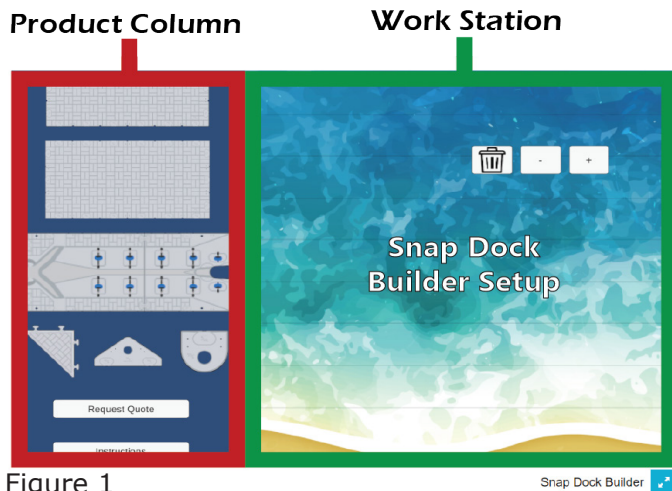

Figure 1

Figure 1 illustrates the initial screen an end user or dealer sees when clicking on the *Snap Dock Builder* Tab on our website.

The *Product Column* outlined in **RED** identifies Snap Dock Products that make up a draft of a dock layout.

The *Work Station* is outlined in **GREEN**, which identifies the area in which items will appear to construct a draft layout.

Figure 2 illustrates A 60" dock section that is selected to start a dock layout.

To choose a product, hover the mouse pointer over the desired item, then *single-click* to populate it into the workstation.

Note: Keep in mind that the number of times a product is selected will produce the same number of items into the workstation. If unwanted items populate, drag the item to the trash can to dispose of an object.

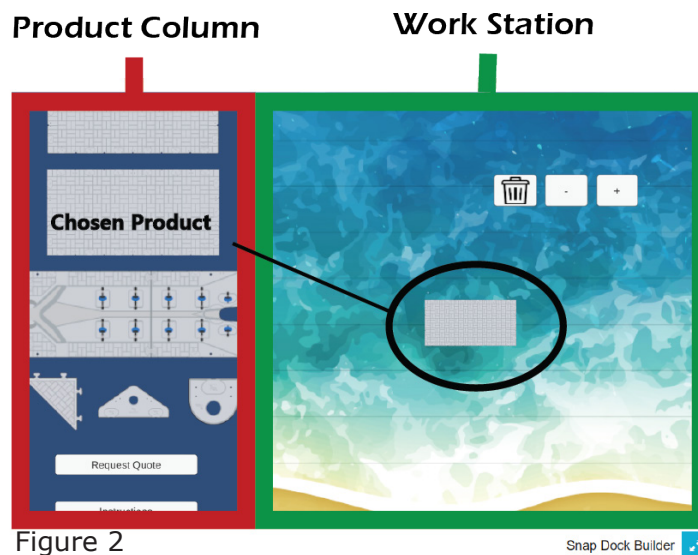

Figure 2

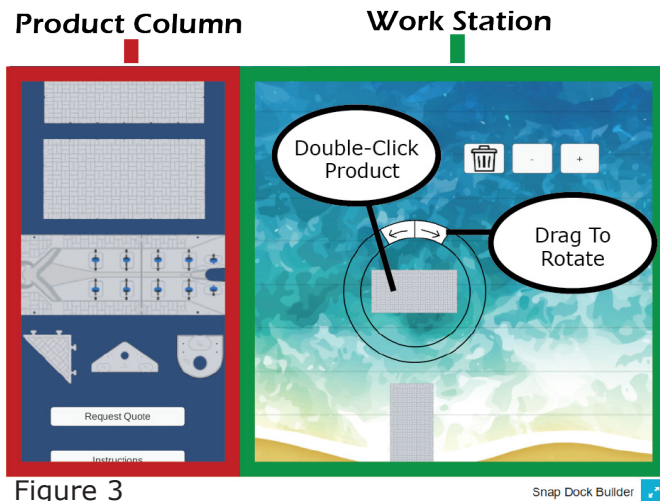

Figure 3

Figure 3 illustrates how to rotate a 60" component once it is into the workstation.

To rotate an object, the user needs to double-click directly on the product. The circular rotational tool will appear as two circles with opposite directional arrows. Use the cursor to click and drag the item in a circular motion for the preferred angle.

Figure 4 illustrates how a drafted layout will be presented using *Snap Dock Builder* application tool.

For end users, underneath the *Product Column* there for is a *Request Quote* button that will send the complete drafted layout to the sales team to will be sent to one of *Snap Dock's* dealers or distributors for quote.

For Dealers, create a screenshot of the Snap Dock Builder after a completed draft is done. This will create a image to share with the customer.
